

16th July

ICT & Me.

This Is the Technology Stuff I use:

- **Computer/Laptop**
- **Mobile Phone**
- **Hair Straightners**
- **Television**

My Computer/Laptop.

I use the computer at home and in school. I use the computer at school for ICT, Travel and Tourism, Maths, And Many Other Lessons. We Have Access to the Internet which helps us find out information for work. Also at School we use the Microsoft programmes such as Microsoft Word, Microsoft excel. We learn all different techniques and new Programmes Such as macromedia Dreamweaver where we can create websites.

At Home However I use my laptop for Other Programmes Such as Msn, Bebo, Limewire, And Many Others. I Sometimes Use My laptop for Homework.

My Computer completes my needs aswell because it holds pictures, music, Programmes and Files. It doesn't have a big amount of memory but has enough to hold my Stuff. If I Could Change anything about it I would have one with more memory.

Mobile Phone.

I have a Sony Erricson w880i Phone.

It Does Many Different Things.

It is the phone I wanted.

I have it on contract which means I have a bill at the end of the month. I have gone over few times though!! It also rings people and does texts which is good for me as I use my mobile a lot.

It has a camera and 1GB Memory card.

It also does 3G and Holds a lot of songs.

It completes my needs and I wouldn't change anything.

Hair Straighteners.

I have ghd straighteners and they are a well known brand.
I use them everyday to straighten my fringe and sometimes the back.
When I have my hair down I straighten it all.
It doesn't have a temperature gage but my straighteners goes up to 210 degrees.

GHDs are usually the ceramic straightener most highly recommended by our stylists. They stand for *Good Hair Days* and every time they are used that's exactly what they achieve, This versatile styling tool can be used to straighten, curl and flick hair creating movement and smoothness in any hair style. They come in three different sizes: mini, original and salon. The mini styler is approximately half an inch wide and should be used for short or gents hair. The narrow plates allow you to reach all the way up to the crown giving you definition in your hair style; these are priced at around £85. The original has plates which are approximately 2.5 cm wide and are priced at £95. The 4 cm wide salon styler is perfect for long, wavy and thick hair is priced at £100. Most shops Have these and are very popular.

My Television.

I like my television in my bedroom because I can lay in bed and watch it and when mates come round we can watch it on our own. It is about 40" wide and suits my needs. It has a DVD and video player underneath which are separately plugged into the scart lead and wall. I use my television everyday and my family do to. It satisfies my needs and I like my TV very much.

If I had more money I would like a bigger television and I would not change anything on my television I have now.

The Other Television In My Front Room Is About 42" Wide. We Use this as The Main TV, Because It is Greater Then The Others In size and Has a better Picture. It also has sky which has many channels.
