

## Use of Hardware

The two hardware that I used to produce this website are a Keyboard and a mouse. The need to capture data quickly and accurately has led to a wide range of input devices. For this project there are not many choices of hardware that I could have used other than the mouse and the key board. I could have used some other software such as concept keyboard, graphic table, touch screen, a scanner and a digital camera but these were needed due to the project that I was producing being so simple and did not need the help of these hardware. The advantages and disadvantages of a keyboard and a mouse are:

<u>Hard ware</u>	<u>Advantage</u>	<u>Disadvantage</u>	<u>What else could I have used</u>
Key board	It is very simple to use and comes free with a computer that you get. This has every key and letter place to suet us to give us the most comfort.	This it is not wireless and that it cant be moved far form the computer and there are only letters and numbers on it and most of the functions of the keyboard are hidden. It is only in English so other languages could not be typed in by this qwerty keyboard.	I could have used a concept keyboard which would have been even simpler to use.
Mouse	The advantage if using a mouse is that it is very simple to sue and has two buttons. This makes it very easy to use and anyone could	The mouse could not always be the correct size to make it comfortable to use. The mouse that I used was not wire less and had a rollers	I could have used a graphic tablet. This would have been ideal for drawing things such as the logo and for designing the

### Use of Software

In this project I used one major software which is called Serif Web Plus. There are many reasons why I choose this website instead of any of the other more famous software that are out there. One of the main reasons why I chose this software to produce the website was because this is a very easy and simple software to use. This does not have many confusing steps. I preferred this software instead of Microsoft Front Page due to FrontPage being so confusing and so hard to use. Web Plus 9 breaks down the technical barriers, enabling anyone to create their own professional looking site. As with all Serif software, this Web creation superstar is full of features that make it simple, easy-to-use, powerful and quick. With Web Plus' enhanced interface, incredible graphic presets, Web design functionality and publishing capabilities it is even possible to create a webpage within two hours. But the longer you take the more detailed and more accurate the web site will be.

<u>Software</u>	<u>Advantage</u>	<u>Disadvantage</u>
Serif Web Plus	There are many advantages to this software. One of this is that this software is very simple to use and you might even be able to create a	Every thing on this software is very simple and the page that you will be creating could only be a size of an A4 sheet. If you use software

	<p>finished and a working website in within two hours. Every thing on this software is very easy to access and is very easy to use. One you start using this software you will find out how easy it is to create a website from scratch. There are a lot of variety of choices of colours, pictures, text, buttons and many other shapes that could be used to build your own website. This is one of the easiest web authoring software to create a link that I have come across.</p>	<p>such as FrontPage you could make the page as long as you desire to fit the information you wish to enter. There a lot of things that you can not do using this software. This software seems to cause a lot of freeze in the computer sometimes and some the functions are too complicated to use or to learn.</p>
--	--	---

I could have used Microsoft FrontPage instead of this software but the MHC manager just wanted me to create a simple web page that included everything that they wanted me to include in this. I chose this software over FrontPage for one main reason and that is because of Serif Web Plus being so simple to use and the FrontPage which is very complicated and very advanced software to make a website on.
