

$$(1423)(1423)$$

6/3

The identity is unique and is generated by composing an element of order 4 with its inverse.

There are $\frac{4 \cdot 3}{2} = 6$ elements type $(**)$

$$(12)(13)(14)(23)(24)(34)$$

$$(24) = (1423)(1243)(1423)$$

(24) is a rotation of order two about the midpoints of edges connecting centres 2 & 4.

All rotations of this type are conjugate since any pair of opposite edges can be rotated to any other pair.

Also

$$(12) = (1432)(1243)(1432)$$

$$(13) = (1423)(1342)(1423)$$

$$(14) = (1324)(1432)(1324)$$

$$(23) = (1324)(1234)(1324)$$

$$(34) = (1432)(1342)(1432)$$

There are $\frac{4 \cdot 3 \cdot 2}{3} = 8$ elements

of order 3, representing rotations of order 3 about pairs of opposite vertices. Since any such axis of rotation (or any such pair of opposite vertices) can be rotated to any other, all these rotations are conjugate.

$$(123) = (1324)(1342)$$

$$(124) = (1423)(1432)$$

$$(142) = (1324)(1243)$$

$$(134) = (1432)(1423)$$

$$(143) = (1342)(1324)$$

$$(234) = (1243)(1324)$$

$$(243) = (1234)(1423)$$

$$(132) = (1234)(1243)$$

But you are not making use of this.

Any rotation of order 4 is found by composing that rotation of order 4 with any rotation and its inverse.

$$\begin{pmatrix} 1 & 4 & 3 & 2 \\ 2 & 1 & 2 & 1 \\ 3 & 2 & 4 & 3 \\ 4 & 3 & 1 & 4 \end{pmatrix}$$

$$\begin{pmatrix} 1 & 4 & 2 & 3 \\ 2 & 3 & 4 & 2 \\ 3 & 1 & 3 & 1 \\ 4 & 2 & 1 & 4 \end{pmatrix}$$

$$\begin{pmatrix} 1 & 2 & 4 & 3 \\ 2 & 4 & 1 & 3 \\ 3 & 1 & 3 & 1 \\ 4 & 3 & 2 & 1 \end{pmatrix}$$

$$\begin{pmatrix} 1 & 4 & 2 \\ 2 & 1 & 4 \\ 3 & 2 & 3 \\ 4 & 3 & 1 \end{pmatrix}$$

$$\begin{pmatrix} 1 & 4 & 3 \\ 2 & 3 & 2 \\ 3 & 1 & 4 \\ 4 & 2 & 1 \end{pmatrix}$$

$$\begin{pmatrix} 1 & 3 & 1 \\ 2 & 4 & 3 \\ 3 & 2 & 4 \\ 4 & 1 & 2 \end{pmatrix}$$
